

Sharp Grossmont Hospital
David and Donna Long Cancer and Cardiovascular Center
La Mesa | CA

The center brings together a cancer treatment and cardiovascular diagnostic institute with support services including two LINACS with associated control rooms, a simulator, lab, pharmacy, and conference and education facilities. The award-winning facility was specifically designed to stimulate the positive mental attitude that is key to healing.

The center's patient-focused approach allows patients to see their medical and radiation oncologist, receive lab work, undergo various treatments like chemotherapy and consult with a pharmacist or social worker in one location. Patients only need to park and register once. Because all the cancer specialists are under one roof, face-to-face conferences and second opinions happen naturally. A full group of specialists review all new patient cases before beginning treatment.
