

STARS, Sub-Acute Treatment for Adolescent Rehabilitation San Leandro | CA

STARS' goal is to restore children to their highest level of independent self-care by having multiple levels of treatment on one campus. Delivering this care in the community reduces the total cost of care. The STARS program provides outpatient, residential and sub-acute care for adolescents.

The campus-style treatment center, on the grounds of an existing hospital, surrounds a landscaped court-

yard, creating an enhanced sense of community. The courtyard is used for recreation, performances and outdoor classrooms. Four connected eight-bed cottages make up the residential group home. A 15-bed skilled nursing building provides sub-acute care. The entire campus is supported by a school and surrounding village of support spaces. Utilizing the symbolic image of the little red schoolhouse, the STARS campus creates an overall sense of security.

American Institute of Architects, Committee on Architecture for Health and Modern Healthcare, Citation for STARS Adolescent Treatment Facility, San Leandro, CA.
